

# Kosmos

An Evolutionary-Wholistic Account of Creation

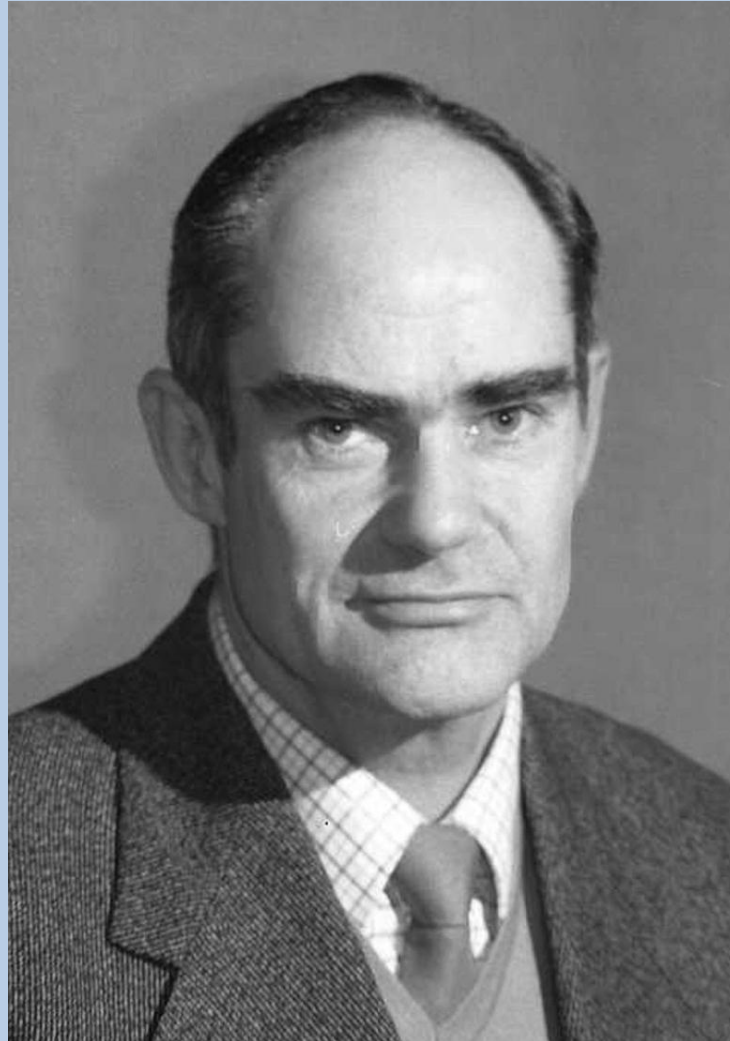

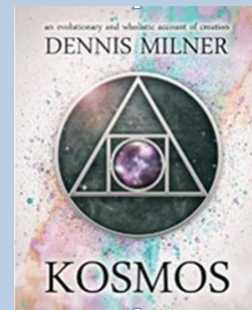

By

Dennis Milner D.Sc., F.I.M., F.Inst.P., C.Eng.

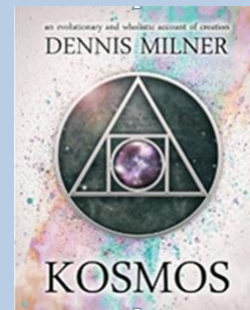

Presented by Guy Steven Needler

# Dennis Milner

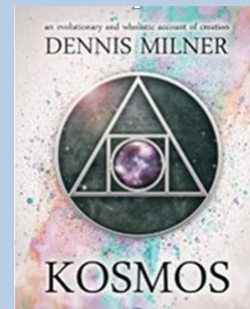

17 June 1924 – 23 November 2011

# Agenda

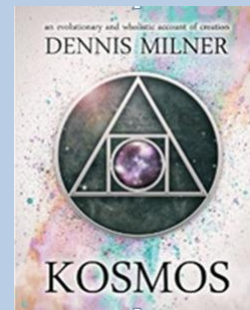

- A Short History Of Dr. Dennis Milner
- The Four Corners of the “Kosmos”
  - Registration of Etheric Force Activity
  - An Evolutionary-Wholistic View of Creation
  - A Simple Technique for Unravelling the Atom
  - A Scientific basis for Homeopathy

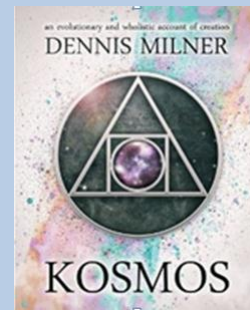

# A Short History of Dr. Dennis Milner

# A Short History of Dr. Dennis Milner

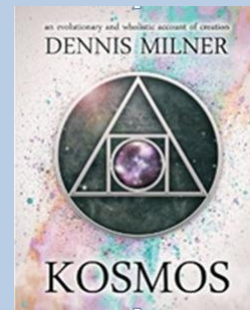

- After the war, grants were offered to service men and women whose education had been interrupted. Dennis took advantage of this and went to Queen Mary College to study Physics.
- Dennis chose to study Physics because it seemed to offer the means to understand the world.
- After finishing his degree he went to work at Birmingham University as a metallurgist and eventually gained the degree of “Doctor of Science” (D.Sc.) for his work.
- However, although it could explain physical processes, science couldn’t explain the important experiences he’d had in life.
- Together with his colleague Ted Smart, he embarked on additional research alongside their metallurgy work; they decided to research the meaning of life.

# A Short History of Dr. Dennis Milner

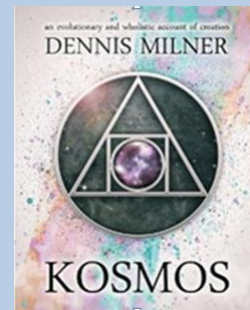

- Dennis and Ted made some progress and gave a set of lectures in the early 70's which generated some interest.
- In 1976, they published their first book "The Loom of Creation", and gained funding to take on 3 young researchers, Brian Meredith, Andrew McNeil and Harry Dean, to progress the work.
- The group produced some fascinating results and insights, publishing "Explorations of Consciousness".
- After Brian, Harry and Andy left, Dennis and Ted continued the work, gradually putting together the intriguing pieces of the jigsaw puzzle. After Ted passed away, Dennis continued on his own and in 2006 self-published "Kosmos".
- Unknown to Dennis, in 2010 his "Son-In-Law" submitted his work to Ozark. – Incognito!
- In 2011 it was accepted for publication.

# Registration of Etheric Force Activity

# Registration of Etheric Force Activity

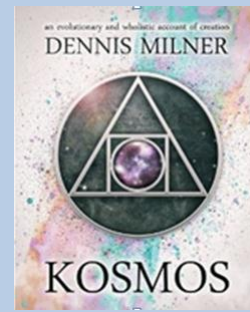

- Mystics and clairvoyants claim there are auras of activity permeating and surrounding the physical bodies of plants, animals and humans.
- In the Department of Metallurgy at Birmingham University; seeking evidence for this auric activity, Dennis and Ted embarked on an extra-curricular research, picking up on the work of a Dr. Baraduc who, in the early 1900s, registered an 'auric surround' to a human hand.

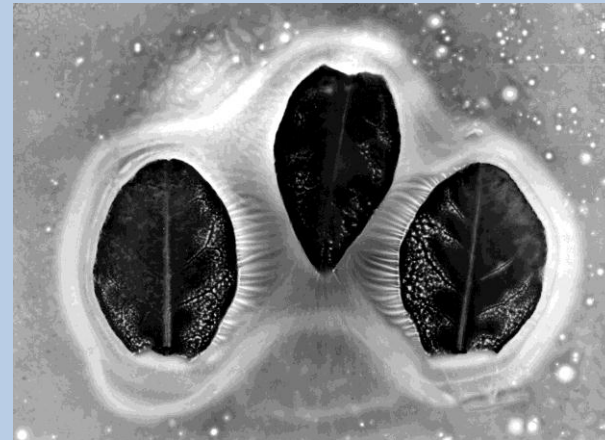

Electrophotographic registration around a hand obtained by Dr. Baraduc, circa 1910.

# Registration of Etheric Force Activity

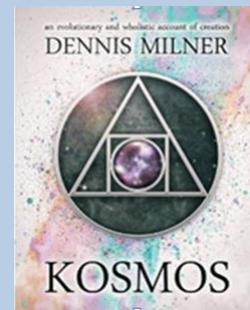

- Akin to modern Kirlian photography, Dennis & Ted found a way of registering auric phenomena around leaves by putting them in a 'sandwich' between two photographic plates, with metal plates outside them to which they applied pulses of high voltage, using a Wimshurst machine or a Van de Graaf generator.

- These seemed to conform to what people perceive in a heightened state of consciousness, as for example described by the chemist Sherwood Taylor.

# Registration of Etheric Force Activity

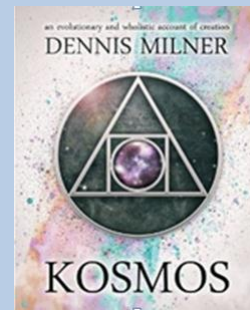

- Pheobe Payne states that etheric clouds emanate from plants, whilst Eileen Garrett states that plants have a 'surround' that appears to move or breath gently.
- The energy/aura healer Barbara Brennan suggests lying on your back on a sunny day, relaxing and seeing white globules of energy flow into the aura around a tree.
- They expanded their 'electrophotography' researches with the use of a purpose built power source designed by Michael Watson with which they applied a single controlled pulse of high voltage.
- This created clearer results.

# Registration of Etheric Force Activity

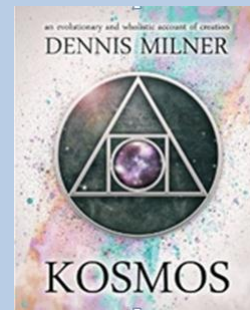

## Space Energy/Etheric Forms

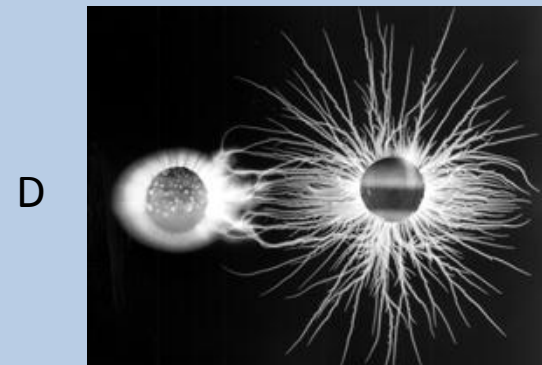

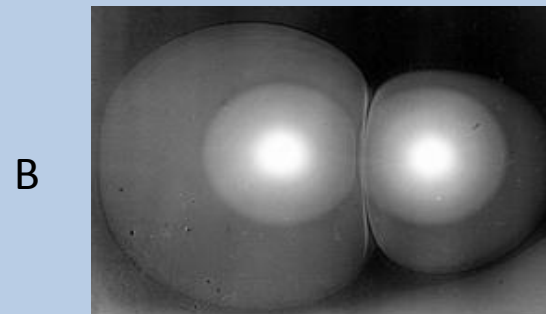

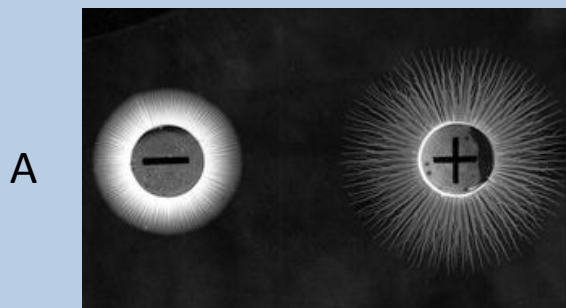

- A basic problem was that, if they were registering what clairvoyants and mystics describe as the etheric aura around plants, then how was this happening?
- On the basis that plant activity could be associated with an effect in the surrounding 'ether/energy' of space, they tried creating disturbances in the 'ether/energy' of space by electrical means.
- These registered equally well.
- They also found that they did not need a photographic emulsion but that if they coated a glass plate with fine powder, e.g. of the type used in photocopy machines, this registered the phenomena.
- Furthermore, by examining the distribution of the powder under a low power microscope it was possible to get further information on how the observed phenomena had formed.
- They tried many experimental configurations and found that positive potentials were associated with a suctional effect and negative potentials with an expansive effect.

# Registration of Etheric Force Activity

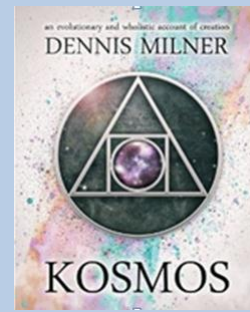

## Space Energy/Etheric Forms

- Some examples of forms created in the 'ether'/space energy by electrical potentials (a) an expansive daisy-like pattern created around a short cylindrical electrode to which a negative potential was applied and a suctional root-like pattern created when a positive potential was applied. (b) Interaction between two negative expansive patterns, (c) interaction between two positive suctional patterns, (d) interaction between a negative expansive and a positive suctional pattern.

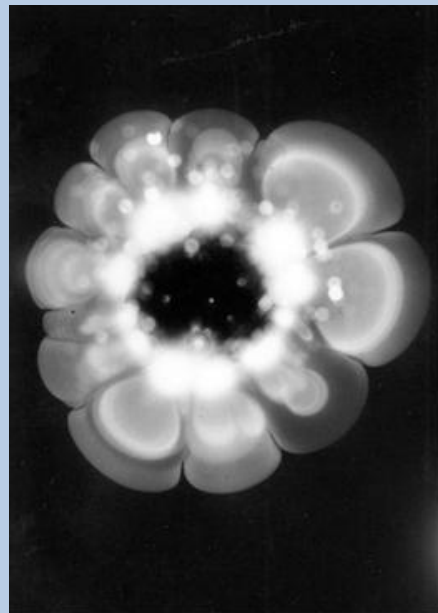

# Registration of Etheric Force Activity

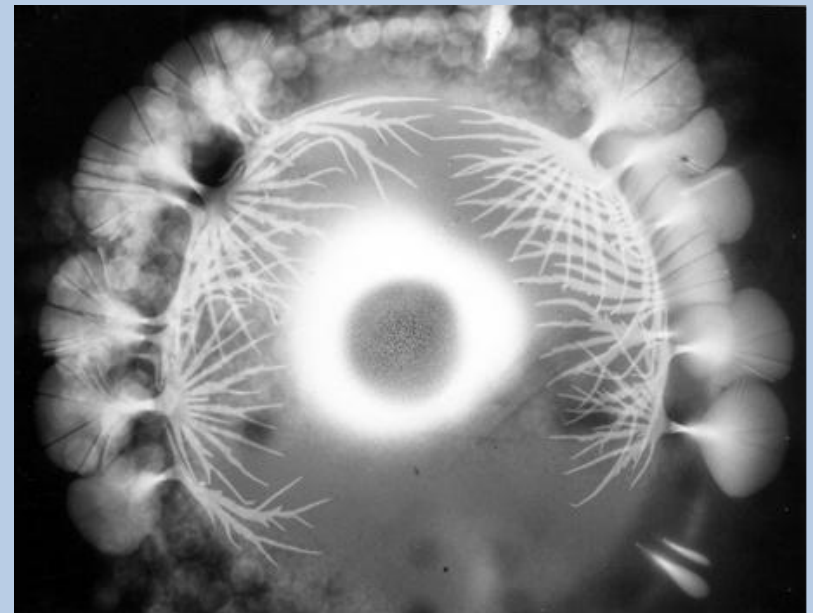

- Examples of forms in the ether/space energy created and registered by electrophotography using the 'sandwich' arrangement (a) a feather-like form, (b) a flower-like form: (c) with a heated metal stud in the glass plate on the negative side of the sandwich on which they put a piece of wet filter paper and obtained plant-like forms.

A

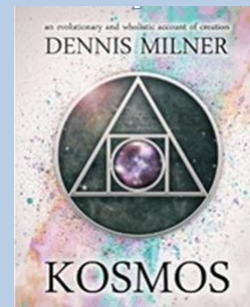

B

C

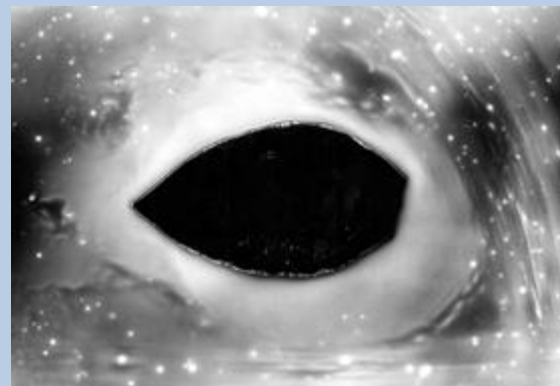

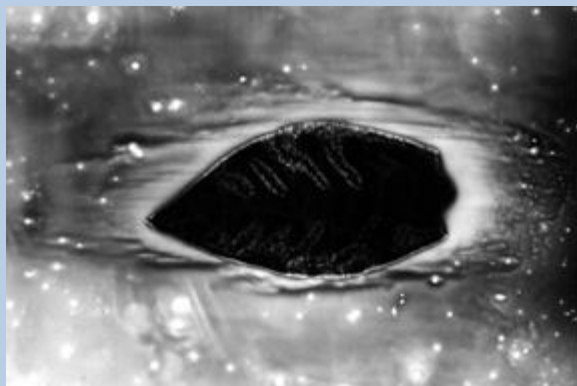

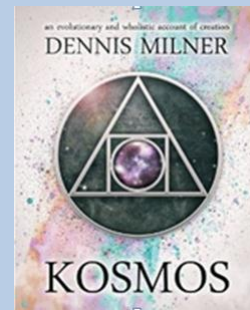

# Registration of Etheric Force Activity

- In exploring the electrophotography technique they started to understand “what is going on” and the significance of the results that it produces, e.g. what these show about the nature of the ‘space energy’/ether.
- They referred to the fact that Dr John Pierrakos stated that when he developed expanded awareness he observed flows of energy associated with living activities, occasionally they registered something like this with leaves.

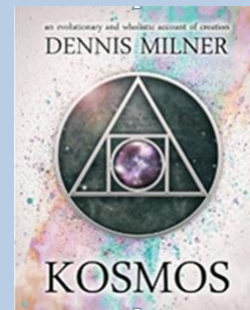

Here are two examples of privet leaves showing apparently associated flow phenomena in their environment. These results were obtained using the multipulse power source.

# An Evolutionary-Wholistic View of Creation

# An Evolutionary-Wholistic View of Creation

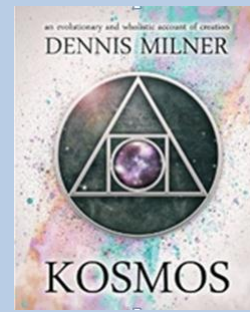

- Theoretical physicist Paul Daniels reviewed phenomena that show a creative power and self-organising ability in Nature.
- He concluded that it is not possible to explain this in terms of molecules and inter-atomic forces. (there must be something else going on).
- The mystic's explanation of life/etheric, soul/feeling and spirit/thinking activities lying behind Nature might resolve these problems, but they are vague.
- The most comprehensible account Dennis & Ted found was by Rudolf Steiner
  - *“A hierarchy of spiritual beings working in a ‘cosmic ether’, to implement the plan of a remote, awe-inspiring Godhead”*
  - *“That all forms come about as the result of four ‘etheric’ forces”*
- While struggling to understand Steiner's ideas, Dennis & his team came across an expanded consciousness technique with which they experimented to see if they could perceive these forces for themselves.

# An Evolutionary-Wholistic View of Creation

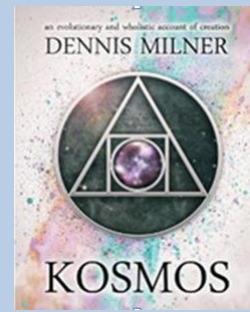

(Working with an expanded consciousness technique)

- They found it comparatively easy to achieve an expanded consciousness state in which they got insights by images, feelings or words.
- These conveyed information that could be comparatively mundane, or seemingly from a source of great wisdom, depending on the nature and quality of their questing and/or what the 'source' seemed to think they needed to know.
- In these expanded consciousness experiences (ECEs) the other members of the group entered into an expanded consciousness state whilst Dennis acted as a guide, to direct the questions.
- At first the insights were concerned with the inner problems and development of the group members but then they found they could ask questions about the etheric force activity in their experiments.

# An Evolutionary-Wholistic View of Creation

(Working with an expanded consciousness technique)

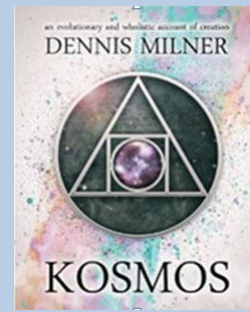

- It seemed they had established contact with intelligences that could in some way perceive the workings of these forces and had a much larger and deeper vision of the workings of the Universe
- They ‘consulted’ them for many months but they could not get a satisfactory explanation for their results.
- Then an image that purported to be Rudolph Steiner appeared saying that they needed to bring the Christ force into their work.

*Harry: I have an image of Steiner. The link is very strong between him, or them, and us. But there’s something we’ve got to do. We have to open ourselves up and bring the Christ force into our own resources.*

- None of them had any religious convictions but the ECEs gave information on the nature of the Christ force and the Christ path.

# An Evolutionary-Wholistic View of Creation

(Working with an expanded consciousness technique)

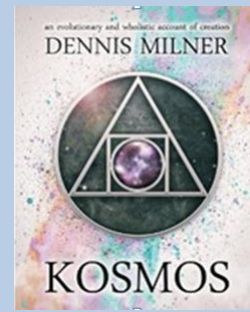

Harry: *If one mentions the Christ force and the Christ path, one imagines all sorts of spiritual, mystical or holy feelings but it's not like that. It's a very practical down-to-earth sort of thing. The Christ path is a very patient path: it just waits for people to join it. I get the picture that the Christ force doesn't assert itself. It's there but it fades into the background.*

- At first the ECEs had pursued Steiner's viewpoint that everything happened according to the plan of a remote Godhead but after this their ECEs portrayed an all-embracing Godhead who evolves through His Creation.

Brian: *We've thought about the Godhead being something untouchable, incomprehensible, unapproachable. But we don't need to. We are tiny but we are part of the Godhead, we are part of him. He's in evolution himself. He doesn't know what is going to go on, in that he is as much involved in it as we are because we are him. This is not chaotic, there is order, a specific way of things.*

# An Evolutionary-Wholistic View of Creation

(The nature and workings of the Absolute)

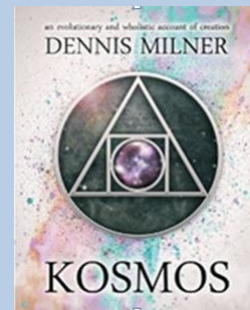

- They found this idea of everything consisting of an all-embracing, evolving Godhead difficult to grasp, because even though they were given various governing principles they were difficult to comprehend.
- They made little progress in their understanding until the idea of a creator Godhead was replaced by an 'Absolute' when Ted had an ECE that portrayed the beginning of 'physical activity' by the Absolute.

Ted: *I'm drawn back to the stage when all is one – a vast quiet nothingness. Then parts of it begin to move, parts of it arise and collapse. Then somewhere else a centre arises – for a brief moment the part that is outside witnesses the turmoil and with this comes the appreciation of the raw potential. It's not a case of thinking about what can be made and then assembling the materials to do it. This happens the other way round. The Absolute gets to know itself and then it recognises what it can do. This is something that develops as it goes along.*

-

# An Evolutionary-Wholistic View of Creation

(The nature and workings of the Absolute)

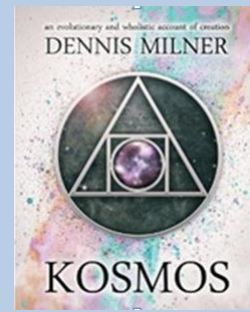

- According to this viewpoint everything is part of an 'Absolute/Energy' which starts in a dormant unconscious state and then experiences a succession of impulses which cause 'eruptions' of activity.
- As the Absolute develops, becomes aware of, and learns to control its eruptions, these become a coherent rhythm of activity, as portrayed in one of Andy's ECEs:

*Andy: I saw a pair of strong hands and I held these. They were Christ's hands and they were offering strength and support. I feel myself moving towards a vantage point where you see everything – a still centre. Then I saw a gateway into a garden. Christ led me through the gate and I left a part of me behind. This was the collection of prejudices, fears and weaknesses that would get in the way – Christ and I are sitting on benches facing each other. What do you wish to know? He says.*

# An Evolutionary-Wholistic View of Creation

(The nature and workings of the Absolute)

Guide: In recent months we've been led to a Godhead and given a variety of images. Were these steps along the way that we can now discard and concentrate on the Absolute?

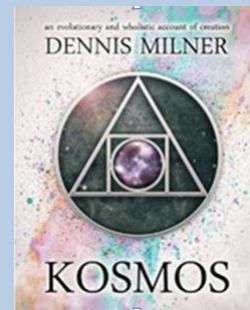

*Andy: Christ stepped aside to reveal a powerful blaze of golden light so that I was face to face with the Absolute. I see the Absolute with a great cloak of his creation spread out around him, and he takes everything in and analyses it. I feel some kind of dissatisfaction, tension, impatience, the sense of something unresolved. He's picking out all the unresolved things he wants to work on.*

*The Absolute is perfecting the creation that's already there as well as advancing new creation. It's an endless process. As fast as the Absolute is able to reach out and make a perfect creation there's always more further out which is growing in a disharmonious way.*

# An Evolutionary-Wholistic View of Creation

(The nature and workings of the Absolute)

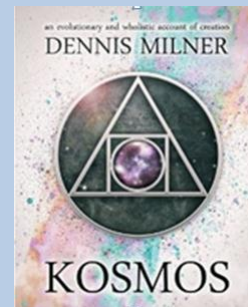

Guide: And just one of these turns is our Universe, everything that we know?

Andy: *The age of our Universe is but the twinkling of an eye of this figure.*

- According to this ECE our Universe is one of a succession of Universes each of which develops out of, and realises new potentials in, the previous one, by which the totality (the Absolute) evolves in stages.

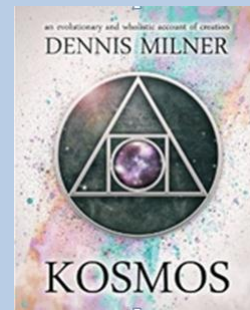

Brian: *Evolution hasn't really started yet, not proper evolution. Humanity will evolve to huge heights. It's going to be an intimate working with each other at spiritual levels in a spiritual evolution. In the present evolution there have been a few individuals who have reached heights and brought some awareness of it back. What will happen is that everyone will be doing these things, ordinary common people.*

# A Simple Method for Unravelling the Atom

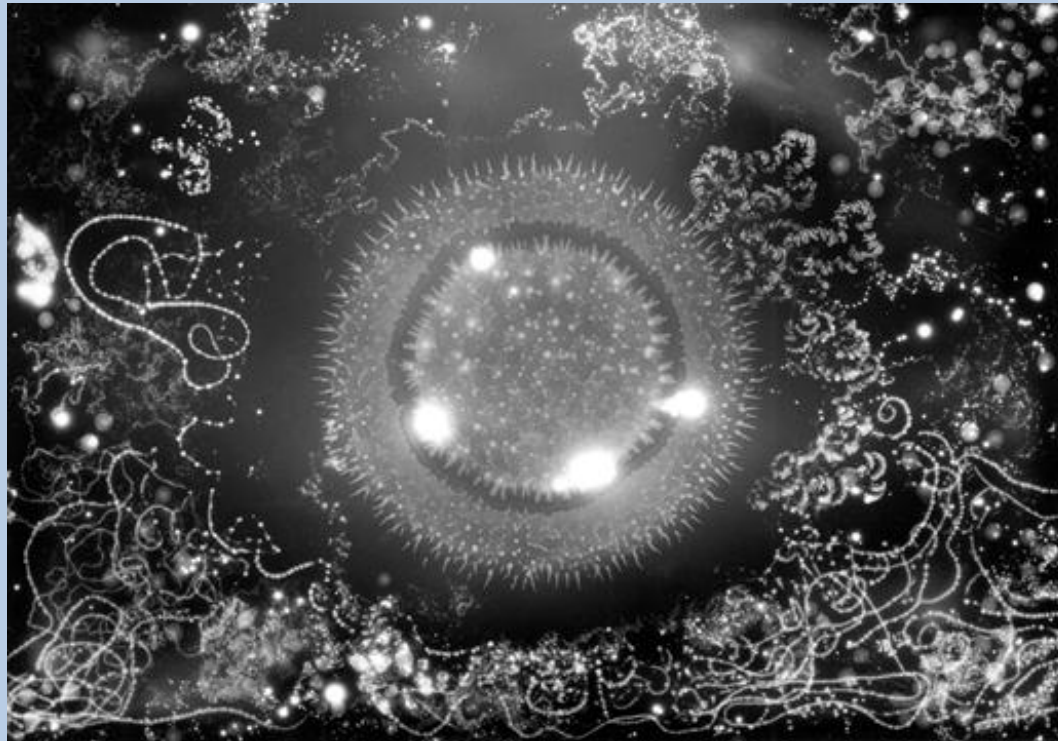

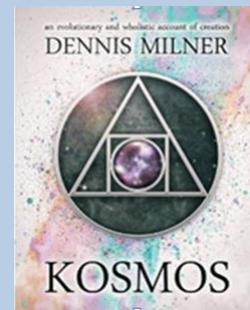

# A Simple Method for Unravelling the Atom

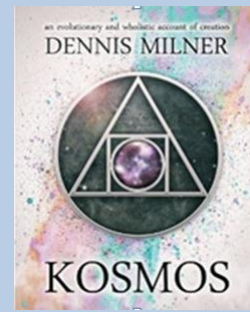

- Dennis described how their electrophotography appeared to register auras around leaves and etheric forces forming organic shapes.
- Another phenomenon they was that of 'activity tracks'.
- These were registered when they put a disc of wet filter paper in the sandwich arrangement and used a lower voltage of 5kv, compared with that which gave the other registrations (usually about 15kv) and a longer exposure time of 10 or more seconds.
- The occurrence of 'activity' tracks built up with increasing the dwell time of the pulse, so much so that with an exposure of 30 seconds the registration of tracks became very congested.

# A Simple Method for Unravelling the Atom

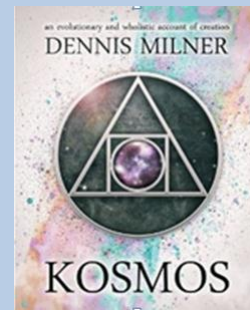

An example of the morass of 'activity tracks' that registered on the positive side of the sandwich when a 5kv pulse, that had no immediate effect, was maintained for 30 seconds with a disc of wet filter paper in the sandwich arrangement.

# A Simple Method for Unravelling the Atom

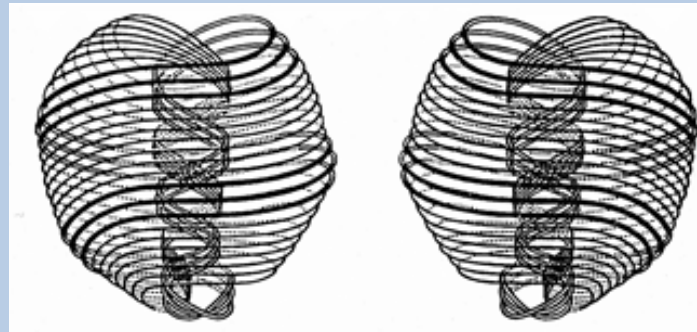

- In the early 1900's theosophically-oriented mystics, Besant and Leadbeater, claimed to be able to enter into a state of consciousness, by a technique taught to them by Indian yogis/mystics, in which they could will "back" the environment around an atom and the atom thereby 'opened up' allowing them to perceive the atom's internal structure.
- They discovered that that physical atoms were comprised of much smaller 'etheric atoms' and that the basis of all substance are two 'ultimate atoms'.
- If the origin of these ultimate atoms, described by the Sanskrit name 'Anu', is traced further back, then one enters the spiritual or astral world.

# A Simple Method for Unravelling the Atom

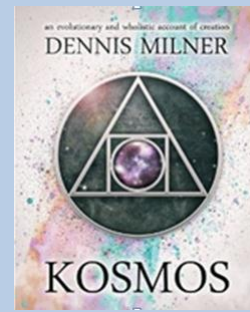

- These ultimate atoms have currents of force entering and leaving them.
- The difference between the two ultimate atom types is that in one the force comes from the spiritual world into the etheric atom, whereas in the other the force flows from the etheric atom into the spiritual world.

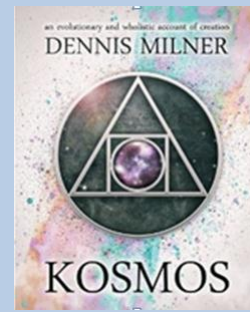

The two types of ultimate atoms or Anu observed by Besant and Leadbeater. Both types comprise spirillae of activity that form a heart shape with a depression at the top. In the positive Anu the flow of spirillae is clockwise downwards from the top and back up again, while in the negative Anu it is anticlockwise

# A Simple Method for Unravelling the Atom

- The two types of Anu are combined together in various numbers and configurations to form a second level of etheric atoms.
- The second level etheric atoms are combined together to give rise to a third etheric level and the same thing happens again to give rise to a fourth etheric level which manifest as gaseous atoms.
- In this way, Besant and Leadbeater claimed, physical atoms comprise large numbers of Anu.
- Hydrogen contains the smallest number of “18” Anu, while heavier atoms contain many hundreds or thousands of Anu.
- The Anu are organised and grouped together in various ways to form the atoms of the higher etheric levels.
- The higher etheric atoms are in turn grouped together to form physical atoms.

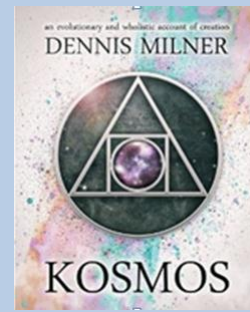

# A Simple Method for Unravelling the Atom

- On the basis that creation goes through cycles of development, in which in each cycle a universe is created that is a reworking and extension of the previous one, this is how these complex atomic structures have been built up.
- Besant and Leadbeater described the structures of all the elements of the Periodic Table and a number of compounds.
- They found that the number of Anu in each atom corresponds with the atomic weight.
- Assuming hydrogen, which contains 18 Anu, as the unit of atomic weight, then dividing the number of Anu which they observed in the atom of any other material by 18 gave its atomic weight as determined by science.
- From their clairvoyant investigations Besant and Leadbeater, described sub-structures to atoms, that scientists have only recently become aware of. They also described the structures of isotopes, the existence of which was not then known to scientists.

# A Simple Method for Unravelling the Atom

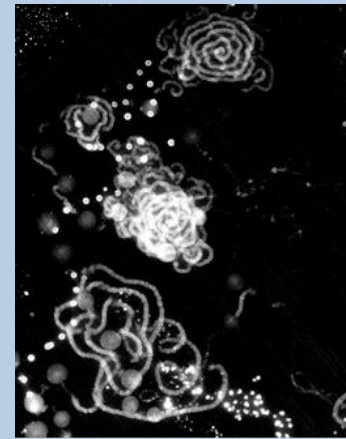

- Some of the 'chains of activity' that Dennis & Ted registered in their experiments conformed to the descriptions by Besant and Leadbeater.
- This led them to think that the electrical stress somehow caused atoms of water molecules to 'unwind' and it was this that registered on their plates.

A

B

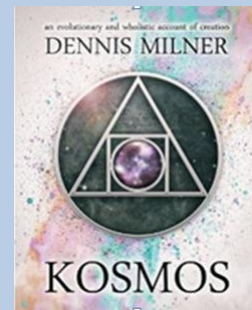

C

D

- (a) Chains of heart-shaped registrations.
- (b); (c) and (d), a selection of the other types of registrations they observed.

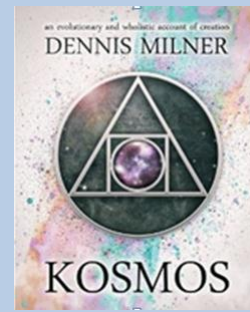

# A Simple Method for Unravelling the Atom

At this stage of their investigations they were using a terminology that they had developed from their working with Rudolph Steiner's viewpoint which regarded everything as living, so that an electron or photon would be a living thing (e.g. a light ether being).

# A Simple Method for Unravelling the Atom

- In their Expanded Consciousness Experiences, Dennis and the team sought further insight into what was happening in their experiments.

Guide: Can you visualise the sandwich set up and look at the formation of the chains?

Ted: *Right, O.K.*

Guide: We will start with the question, 'Are these water molecules unwinding?'

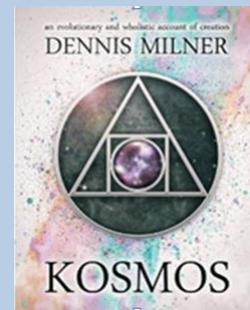

Ted: *There was a 'Yes' to that.*

Guide: Can you get a picture of the water molecules inside the sandwich?

Ted: *Yes, I'm in the gap in the sandwich and I'm surrounded by hundreds and hundreds of water spheres.*

Guide: Now ask if we can look at the disintegration process forming the chains and describe it as you go along.

# A Simple Method for Unravelling the Atom

*Ted: The switch is pressed and light floats out from the top plate in the form of light ether beings that are moving quickly through this cloud of water spheres. Some glance off the spheres, some pass between them and occasionally a light ether being strikes one of these spheres squarely and penetrates it and this begins to release the grip of the individualising light ether beings and the end of the coil of heart-shaped atoms springs out through the gap.*

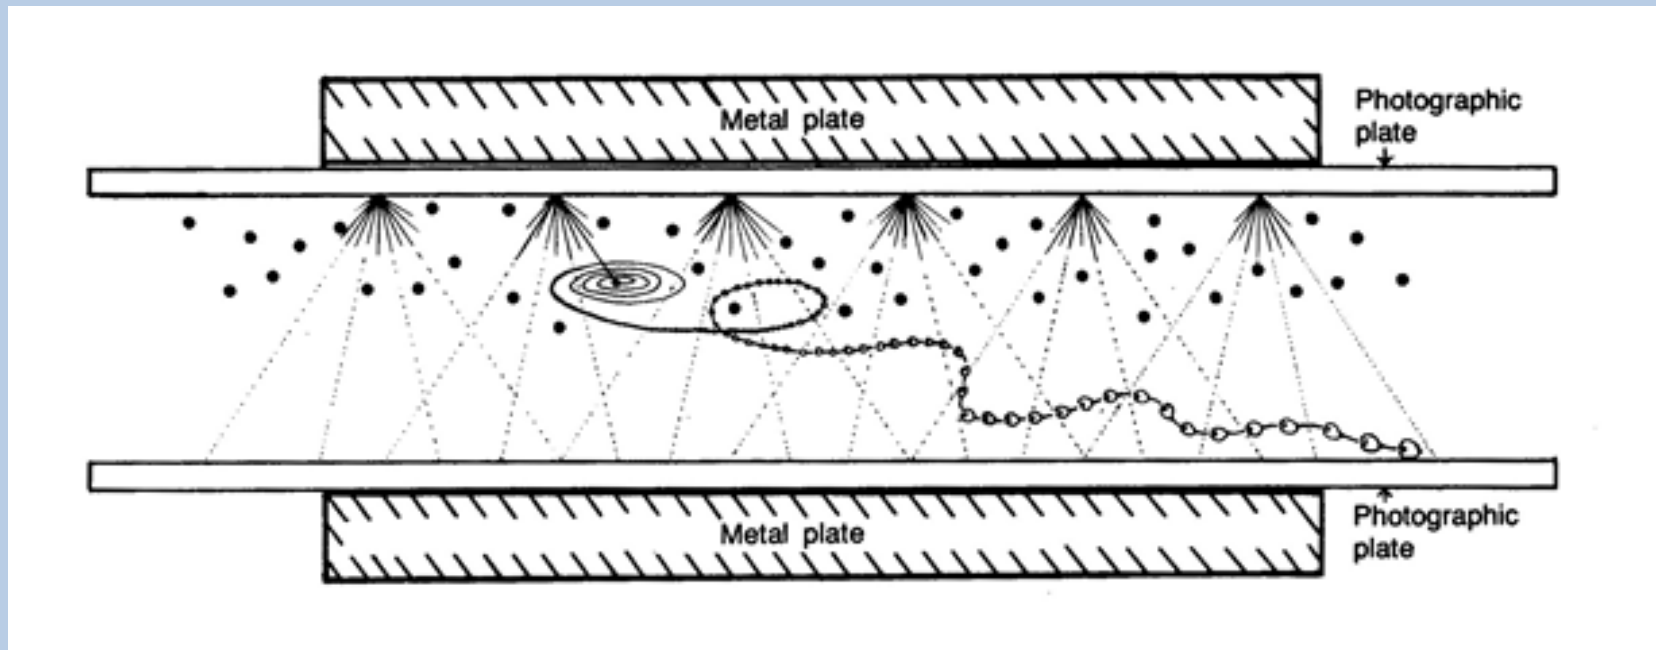

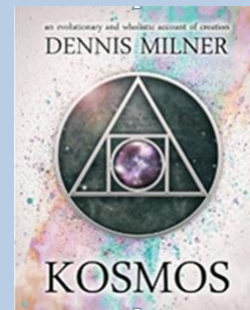

*This then drags out the rest of the chain, expanding as it escapes from the confines of the sphere.*

*This chain goes on unwinding until what was all packed down into one sphere is tracing a path which runs halfway round our plate.*

**Guide:** How does it register on the photographic plate?

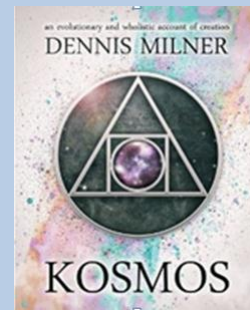

*Ted: The light ether beings from the discharge seem to get a response from the spheres and cause them to illuminate. Then as the chain unwinds it's carried across by the light ether beings towards the opposite side and moves quite gently onto the surface of the plate.*

# A Simple Method for Unravelling the Atom

The way in which Ted's ECE portrayed atoms unwinding and registering on the photo plate in the sandwich arrangement.

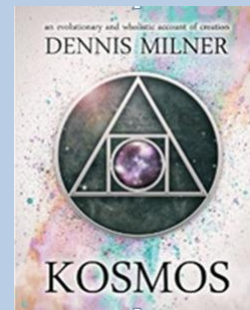

# A Simple Method for Unravelling the Atom

Guide: When you see an atom of hydrogen you see a sphere with coiled up chains surrounded by individualising beings, ask, 'Is that an actual atom or is it a symbol?'

Ted: *Symbol. Words came in that the actual atom isn't unlike this symbolic one but the symbolic atom is all we can cope with. At the moment the true atomic picture is beyond us. What we have is symbolism for it and symbolism for the way in which it reveals itself.*

# A Simple Method for Unravelling the Atom

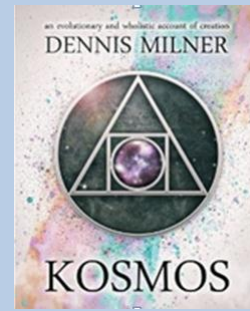

Guide: If we put two hydrogen atoms and one oxygen atom together to get water, again you see it as a sphere - much like the atom. From this we get the impression that the hydrogen and the oxygen lose their identities when they become water?

*Ted: Yes, I saw the oxygen and the hydrogen come together, the three spheres merged and left one sphere which looked the same as the individual ones.*

Guide: Science sees it totally differently. It sees atoms as retaining their individualities and being held together by attractions between them.

*Ted: They are 'serving one another'. The image is showing that they are still there as individuals and yet they've taken up the common role of water. Then when the light ether being comes along this thing unwinds as water.*

# A Simple Method for Unravelling the Atom

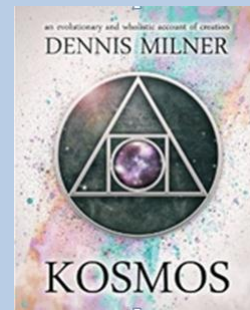

- Besant and Leadbeater stated that when a compound was observed clairvoyantly a mingling of the component parts of the atoms was seen.
- Sometimes the atoms retained their individuality and sometimes they were much broken up.
- Dennis and the team also wondered about the relationship of these experiments to the conventional way in which science splits the atom:

Guide: Impact a high-energy particle on a piece of copper foil in a vacuum chamber, as conventional science does in splitting the atom and see what happens.

*Ted: Well it appears to be very, very violent. The particle strikes the atom, the shell disintegrated, it breaks into pieces. The individualising light ether beings are dispersed and the chain just explodes outwards, it doesn't even begin to unwind, it just shatters completely and the little heart-shaped bits are spread out all over the place.*

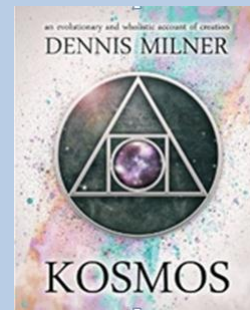

# A Simple Method for Unravelling the Atom

Guide: Is science doing a bad thing when it does this?

Ted: *Yes, it appears to be interfering with the natural order of things but what comes in, is that man works in the material world and has freedom to work with the means available to him. So if he has developed along these lines these are the methods he will use. It's accepted*

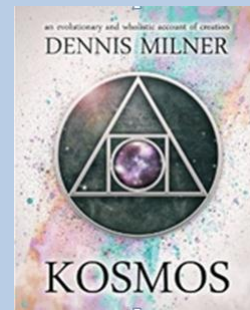

- Unfortunately they never got around to carrying this aspect of their researches any further.
- However, even if this technique is limited to breaking up atomic structures in water and other readily vaporisable substances, because it is a very gentle process that unravels these structures it gives information on how these are organised and, using homeopathic dilutions, it might be possible to find ways of breaking up other atomic structures.

# A Scientific Basis for Homeopathy

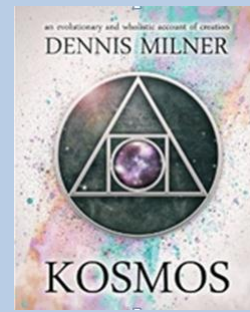

# A Scientific Basis for Homeopathy

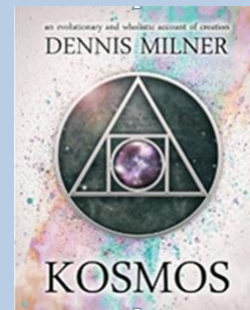

- A group of medical doctors in Birmingham had become disillusioned with drug therapies, many of their patients ended up in hospital with the side effects .
- The homeopathic treatments they used could sometimes have a dramatic curative action without side effects.
- They set up a research group to try and get a better understanding of homeopathy and they asked Dennis to become a member.
- A homeopathic remedy of a substance is made by dissolving it in water and then taking some of this solution and mixing it with ten parts of water, succussing this (a particular form of jolting/shaking), taking some of this and mixing it with ten parts of water and then repeating this process. When this has been done six times the original substance is present as one part in a million and the remedy is known as a 6x remedy and this is a commonly used level. Remedies are often used at much higher dilutions, e.g. 12x, 30x, 200x or even 10m, where m signifies a thousand succussions.

# A Scientific Basis for Homeopathy

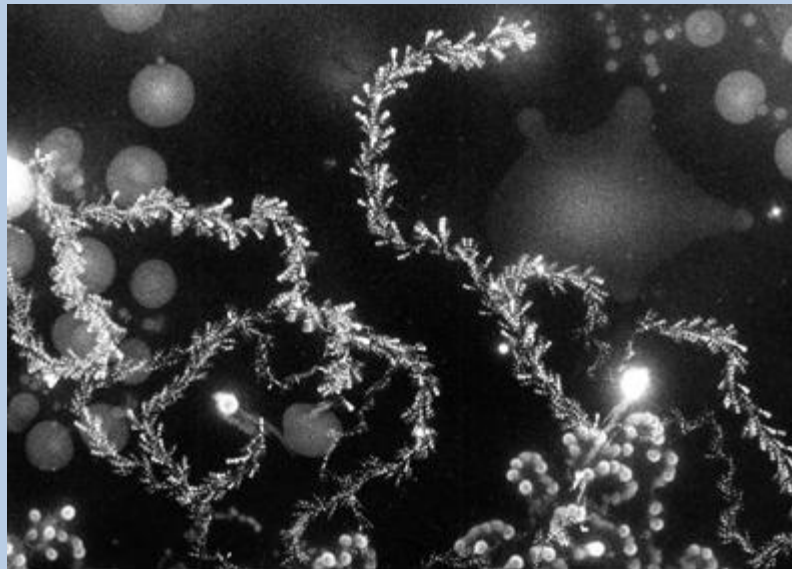

- Critics of Homeopathy claim that such highly diluted substances cannot possibly do anything because there is not even a single molecule of the substance in the remedy.
- Such criticism is based on the idea that the ultimate nature of substance is atoms, whereas according to the viewpoint that an atom of a substance has been built up in successive Universes, then in principle it could be unravelled through all the stages that built it up.
- The more that it is broken up, the deeper the level of the energy that is released.

# A Scientific Basis for Homeopathy

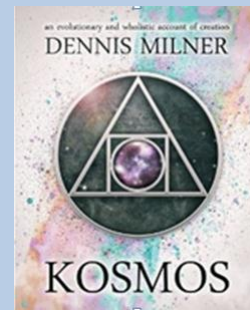

- Dennis and team had used a variety of liquids in their electrophotography, including homeopathic Aurum with which they achieved a different, interesting, result.

A somewhat different type of track they obtained with a homoeopathic liquid, Aurum 12.

# A Scientific Basis for Homeopathy

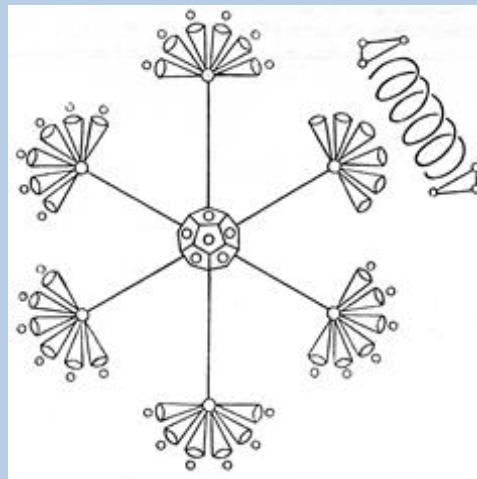

- They asked about the result in an Expanded Consciousness Experience.

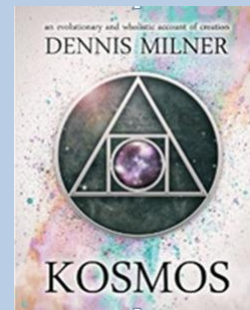

Guide: In principle should it be possible to unwind atoms of any substance by potentiising them?

Ted: *A hesitant 'yes'.*

Besant and Leadbeater described several benzene-ring based Phenol molecules and these show a fan-like structure not unlike the string of fan-like forms that registered in the Aurum photograph

# A Scientific Basis for Homeopathy

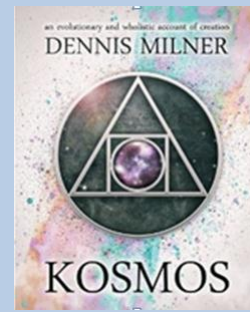

- In Ted's ECE on homoeopathic dilution they had been told that this caused the atom to unwind, so they asked for clarification:

Guide: If we homoeopathically dilute, say, copper, is what's going on in the water the same as the pictures we've got of the unwinding atomic structures?

Ted: *Oh yes, it shows it like that, yes. And the image shows the water very active with the light ether beings in it.*

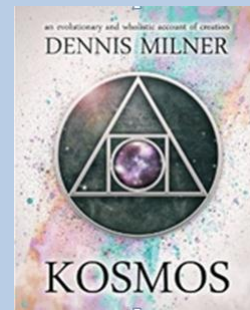

- For some reason, within the medical fraternity there is a strong anti-homeopathy element which seeks to banish it, despite the fact that in the UK about 600 G.P's use homeopathic remedies alongside their allopathic treatments.
- In a recent article a naturopathic doctor, Sherrill Sellman reported using a homeopathic preparation as part of a protocol for treating obesity with great success with herself and with every one of the 200 of her patients.

# Summary

- Dennis realised that the Human “Spirit” effects most of that which we do – specifically in times of personal and collective “stress”.
- Dennis’ desire to understand more about the Human Spirit led to his creating a team of researchers.
- His scientific background allowed an impartial analytical approach to investigating evidence for a greater reality.
- With his team of like-minded and enthusiastic researchers Dennis established and presented “Physical” evidence for the greater reality.
- They established the method of the “Absolutes” process of becoming “Self Aware”.
- They established that the “Absolute” is also subject to the process of “Evolution”.
- Their work is supported by previously reported scientific and mystic evidence.
- “Kosmos” is an excellent anthology of Dennis’ own work, and that externally available supporting evidence for the existence of the greater reality – of Spirit.
