Dakṣiṇāmūrti Dattātreya

Āddyā (Piṁgalā) Nāḍī represents physical energy. Excessive constant flow makes a person aggressive and egoistic. The nature of this Nāḍī is too much hot (Sun). It creates fruitless thoughts, resulting in wasting/ short of resources. (High Blood Pressure). Natives with Āddyā Nakṣatra are prone to these symptoms.

Antya (Iḍā) Nāḍī represents mental energy. Excessive flow of this channel makes a person emotional who often dwell on the past, feel guilty and are easily dominated by others. In extreme cases, they may fall to lethargy and depression because this channel feeds into the skull area; pressure on the brain becomes excessive. The entire system is thrown off balance causing problems, such as mental breakdown, epilepsy, and senility (decay of the brain). This Nāḍī is too cool (Moon) and timely needs to be heated. (Low Blood Pressure). Natives with Antya Nakṣatra could face these symptoms.

7_Pineal **Neptune**, **ruler of the pineal gland**, **is the higher octave of Mercury**. Pineal, Nearly all endocrinologists admit that the pineal gland is the most difficult to understand and the most difficult to treat. This organ was eyes, ears, in fact it was the nucleus through which the rest of the body was built, also the medium through which man received his life from the Father. **This organ is today called the pineal gland-epiphysis**. Man's energies at that time were, like those of the fetus, directed inward to build future organs, and as the prenatal life of the physical body of today is directed and helped by the mother, so was man assisted during his involutionary period by the Divine Hierarchies. He was in direct touch with the higher realms and not yet conscious of his physical environment. In the meantime, eyes, ears, and various organs were taking shape within this ovoid body, while the pineal gland, which is at present such a mystery to medical science, was its only means of communication with the outer world. pineal gland, which is in the center of the brain. The pineal gland is in charge of our endocrine system. It is that mysterious and beautiful leader that manages our metabolism, which manages melatonin, manages our process of sleep; this is key. The **pineal gland manages the sleep of our physical body**, it produces drowsiness-not only that, **the pineal gland is made of the same tissue as your eyes. The pineal gland is the Third Eye: the pineal gland is the root of clairvoyance.** It is the gland that is activated in meditation. When you close your eyes and see darkness now, then when the pineal gland becomes active and enflamed with the fire of the Holy Spirit with the fire of Christ, you close your eyes and you see the superior aspects of all things.

The pineal gland is governed by Aries, is influenced by Aries

Now here we find a very interesting connection. The pineal gland, which is within our brain, rules over our endocrine system, and the endocrine system is the energy of the sex, the sexual forces, hormones. Modern doctors and biologists already recognize that when someone reaches puberty, the pineal gland begins to degenerate: but they do not know why. But in Gnosis, we know why that happens, and we know how to avoid it, or reverse it.

Previous to puberty, the pineal gland is very robust, very active, flooding the whole organism with hormones, with life. (By the way, hormone means "the force of being.") So the pineal gland guides the development of the human organism through the first 12 to 14 years. But at the time puberty arrives, that human organisms begins to repeat past mistakes and begins to abuse the Tree of Knowledge, sexuality, and those forces start to drain out, to be thrown out of the human organism through the orgasm. The result is that the pineal gland atrophies; the imagination of that child begins to weaken; the child become conflicted: emotionally, spiritually, mentally. The child then only seeks approval from others, to have its ego fed, to have comfort in the acceptance of others. All the capacities that the vital body was providing through those sexual forces, like imagination, like memory, like self-awareness, all weaken and even go away. Everyone of us can recall how beautiful life was, even if we had a hard time, we had moments of perception as children which were distinctly different from our moments of perception as adults. Everyone can agree on that!

The reason is that the child is saturated with transmuted sexual energies. In the child, the brain, the pineal gland, is saturated with hormones, with those forces which are descending from God. So we have moments of brilliant self-awareness when we are children, of perceiving things that the adults cannot see. The fact is that very young children are quite clairvoyant,

There are indications that the pineal gland, which regulates the circadian rhythm and which is involved with the regulation and production of melatonin20, is a magneto sensitive system.21 The nightly

production and secretion of melatonin by the pineal gland provides information regarding the time-of-day and time- of-year to the rest of the body, thus acting as a time-cued or 'Zeit- geber' function.22 In mammals the circadian rhythm of melatonin is synchronized by the prevailing light: dark environment with the retina of the eyes doing the photoreception required for the induction of this rhythm.22 Besides visible light, certain ultra violet wavelengths as well as extremely low frequency electric and magnetic fields may be involved with the melatonin rhythm.22 Circadian abnormalities may result from a failure in the entrain- ment processes of internal clocks by environmental time cues.23,24 It has been demonstrated that individuals placed in an underground bunker, thus shielded from the ambient electromagnetic field, showed gradual DE synchronization and lengthening of circadian rhythms, which could be re-synchronized when exposed to arti- ficial magnetic fields. According to Kay4, storms in spring would enhance the sup- pressing effect of increasing daylight on melatonin synthesis, leading to a phase advance in the circadian rhythm, while the effect of storms in autumn would tend to be partially compensated for by the pineal response to decreasing light intensity. The pineal gland was shown to be sensitive to changes in magnetic field exposure in laboratory animals.21 Alteration of the geomagnetic field is associated with a reduction of spontaneous electrical activity in the pineal gland, induction of ultrastructural changes in the pineal gland, reduction of N-acetyltransferase and hydroxyindole-O-methyltransferase, reduction of nocturnal cyclic adenosine 3,5-monophosphate con- tent in the pineal gland, inhibition of melatonin secretion, in- crease glucose uptake in the pineal gland, inhibition of rhyth- micity of responses of Purkinje cells to melatonin in the cerebellum and to inhibition of the enhanced nocturnal analgesic response to morphine in mice.21 The seat of the Human Spirit is primarily in the pi

At the present time the right cerebral hemisphere is governed by Mercury, and the pineal gland, its higher octave, is ruled by Neptune who also has dominion over the spinal canal which is the avenue whereby one pole of the

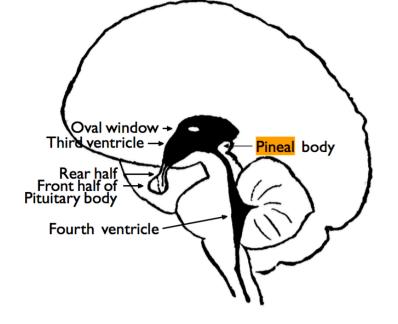

creative energy was originally turned upward for the building of the brain. The ray of Neptune carries what occultist know as the Father fire, the light and life of the Divine Spirit, which expresses itself as will. This it focuses in the voluntary nervous system of the physical body governed by its lower octave Mercury which acting through the right brain galvanizes the body into speech and action, expressing the will of the indwelling spirit.

By this diversion of the creative energy the human being ceased, as already said, to be a physical hermaphrodite, a complete creative unit, and was them compelled to seek a mate in order to propagate the species, Therefore the Son, the Cosmic Christ, focused the love-ray of the Life Spirit upon Uranus, (ruling the pituitary body), who transmits it to the vital body where Venus, the lower octave of Uranus gives it expression in propagation and growth.

The lunar germ: Once a month a lunar germ is formed in the rear part of the pituitary body, (Fig. VI-A, a), and descends on the right side, along the trunk of the involuntary nervous system and its branches, (Fig. VI-B), to the solar plexus, where they become joined by the right vagus nerve of the voluntary system. Branches of these structures are widely distributed over the body cavities, especially over the organs of the digestive system, and are continued downward into the pelvis. As the lunar germ reaches the lowest point, it crosses over to the left side, by way of the coccygeal ganglion in front of the coccyx, and ascends to the region of the left kidney; but usually it drops back to the sex organs and is lost.

The solar germ: There is only one solar germ for each life. The ordinary course of the solar germ is: Once a year, in the course of six months, it descends from the region of the pineal body, in the right hemisphere of the spinal cord to the region of the rst lumbar vertebra; then, during or in the course of six months, after crossing over to and ascending in the left hemisphere of the spinal cord, it returns to the head.

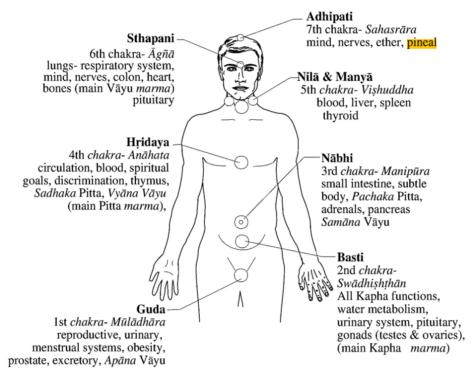

The next month the lunar germ descends again, together with the succeeding lunar germ; if and when the lunar germs are saved for thirteen rounds, equal to one solar year, and the thirteen having merged into one, a divine conception takes place in the head, by the union of the lunar germ with the solar germ, through issuance of light from the pituitary and pineal bodies
